

Final Task

Task Requirements Document

Task Requirements

Exercise 1

As groups, depending on the final project, create the following features for admin, instructor and learner:

5. Progress Tracking and Reporting

The learner receives a report containing his attendance, absence, and grades obtained during one course and a group of courses. It provides the instructor with a report for the learners in each section, and it also provides the admin with a report on the learner performance in all courses and a report for each section.

Note: Don't forget to implement the authentication and authorization in the project.

Task Programming Language and Technologies

- Angular Version 16.
- Visual Studio Code.

Evaluation Criteria

- 50% on functional Code.
- 30% program workflow.
- 10% Screenshots.
- 10% adding extra features that help archive better results.

Deadline

On Tuesday (02/12/2023)

Notes

One team member submits a comprehensive email detailing the tasks that each member in the team have undertaken during the current task and a video presentation that provides an in-depth overview of the requirements.

Here are the key points to include in your email and video:

Email Content:

1. Clearly outline the tasks and responsibilities undertaken by each team member.
2. If any challenges were faced, briefly mention them along with the solutions or workarounds.

Video Presentation:

1. Walk through the presentation on the browser, explaining key features and functionalities.
2. Dive into the codebase, focusing on procedures, APIs, and Angular components.

Remember to keep both the email and video clear, concise, and organized for easy understanding.

Good Luck 💪 😊
